Art Unit: 1615

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1 and 3-13 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for providing energy in the form of heat, does not reasonably provide enablement for any energy source or form. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. The description shows energy applied to the tablet in the form of heat.

Art Unit: 1615

See page 6, lines 5-14. No other source of energy is disclosed. To effectively decrease the tablet hardness heat within a particular temperature range has been shown to be critical. Claims that do not recite heating the tablet are not commensurate in scope with the disclosure.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

Claims 14-23 are rejected under 35 U.S.C. 102(e) as being anticipated by Danielson et al US 6,270, 807.

See column 5, lines 1-26. The example shows a tablet comprised of maltodextrin and sodium starch glycolate. The chewable tablet would inherently have the same properties as applicant's, since the composition components are the same. See also column 4, lines 31-58.

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 1615

Claims 1 and 3-23 are rejected.
